## LUNCH

Please join us at noon on sale day for a complimentary lunch.

## SALE DAY INTERNET VIEWING & BIDDING

If you are unable to join us on sale day, the auction will broadcast on LiveAuctions.tv. We recommend you pre-register at [www.LiveAuctions.TV](http://www.LiveAuctions.TV) prior to sale day.

## SALE TERMS AND CONDITIONS

All bulls sell fully guaranteed under Suggested Sale Terms and conditions of the American Angus Association. Terms are CASH. All bulls are to be paid for during or immediately after the sale and will not be released until settlement has been made. Cattle will not be transferred until paid for in full.

## HERD HEALTH

All bulls are on a complete health program. All bulls have been vaccinated for 7-Way, Blackleg, BVD, Haemophius and BRVS. Bulls were recently poured with Ivomec. **All bulls have been tested negative for trich and PI BVD.**

## FERTILITY AND SOUNDNESS

All bulls have been semen tested and certified as satisfactory breeders. Scrotal measurements will be available sale day.

## PAP SCORES

All cattle have been PAP tested by Dr. Tim Holt. These bulls were born, raised and developed at high altitude. They spent the summer at 7,500 to 9,000 feet. Lazy JB Angus has been PAP testing for over 25 years.

## INSPECTION OF BULLS & HEIFERS

Cattle may be inspected at any time prior to the Sale.

## INSURANCE

Insurance will be available sale day. Please notify sale clerk if you wish to purchase insurance.

## FIRST BREEDING SEASON

All bulls selling for \$3,500 or more are guaranteed to be satisfactory breeders for the first breeding season. *A breeding season is defined as the 90 day period following the first turnout of the bull.* All animals become the responsibility of the buyers when the animal leaves the ring. This guarantee does not cover illness, injury, death or neglect. If a replacement bull is available he will be provided or if the buyer prefers, credit for the amount of purchase minus \$1,500 will be applied toward one bull will be given in the following sale. Buyer keeps the salvage value. Please notify Lazy JB as soon as possible should breeding injury occur prior to the injured bull being sold for salvage. **All breeding injuries must be diagnosed by a veterinarian and all claims must be made by September 1, 2015.** This is not a mortality insurance policy nor does it cover mismanagement or neglect.

## Trucking Discount

Bring your trailer on sale day and receive \$50 off each bull you purchase.

## Liability

All persons attending the sale do so at their own risk, and Lazy JB assumes no liability for accidents, etc.

Dear Friends & Cattleman,

We would like to take this opportunity to welcome you to our 14<sup>th</sup> Annual Bull Sale. Thank you for taking the time to look through our sale book. As always, we look forward to visiting with past customers and forging new friendships. Keep in mind that videos are available online and you have the option to bid online with LiveAuctions.TV for your convenience.

Record prices have put a smile on many faces this year. It's the perfect time to concentrate on selecting high quality cattle that meet all your genetic needs. This group of bulls and heifers have met or exceeded our demand for fertility, soundness, performance and eye appeal. These are tough standards to meet when everyone in the family is involved in the selection process. And we wouldn't have it any other way. With over 50 years experience, spanning 3 generations, Lazy JB Angus's goal to produce a fertile, functional animal with balanced traits has led to PROFIT for our customers.

PAP scores seem to be the current fad with breeders at 4,000 feet or less boasting about their PAP scores. For us, as well as many of our customers, PAP scores are one of our priorities in selecting bulls and females. The cattle offered through our sale are born on open pastures at 6,300 feet. Their summer grazing grounds are mountain pastures just south of the home ranch at 7,500 to 9,000 feet. And they are developed just north of the ranch at 5,800 feet. And if altitude isn't an issue, rest assured that if these cattle can perform at this altitude, they will perform anywhere.

We know you will find the bull or heifer you are looking for. Many of you have asked about heifers, so we have included an exceptional group of females this year. Added features this year include parentage verification on all the cattle and genomic enhanced EPDs on several bulls; these lots have been identified with an "HD 50K" or "GENESEEK" logo.

We thank you for taking the time to look over the sale book and we hope you'll make the trip to Montrose on the 15<sup>th</sup> of March. Come join us for our famous barbecue beef lunch. Please feel free to give us a call; we are here to answer any questions you have.

*Jeff, Kathi, Brandon & Britney  
Richard & Elaine*

Find your way to your seats because this is your opportunity to own a one of a kind future herd sire. He is backed by an strikingly unique cow that has donor potential all over her. If that isn't exciting enough, the sire of this bull adds "wow" to each calf he has sired. This is just the beginning of many opportunities in this sale—this one just might be the best! This impressive bull posted a WW@111 and YW@101.

If you liked the flush mate brothers that we offered last year, you'll like lot 2. Sit back, pour some Bacardi in a glass, put your hands in the air and purchase one the most complete bulls sired by "Bacardi". We believe he's every bit as good as his full brother, Black Razz, who is siring tremendous calves for us.

A deep bodied individual that is a high performing female. 408's ratios are Bw of 105, WW of 108 and YW of 108. Her dam has recorded BW 2@103, 2 WW 2@107 and YW 2@108.

# *Our Sincere Appreciation to the Following*

Dr. Tim Holt, Fort Collins, CO for PAP testing our cattle.

Dr. David Kuntz for fertility, trich and BVD testing.

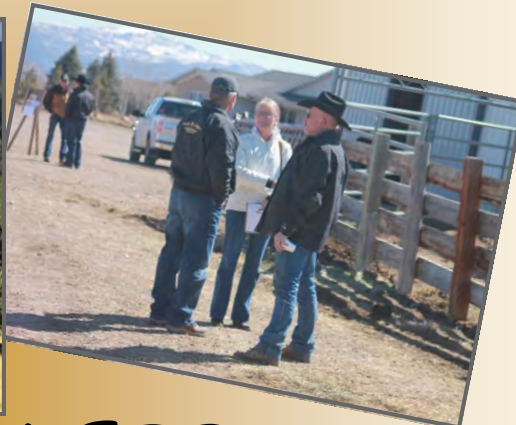

Western Slope Animal Hospital for providing us with our general herd health needs

Wesley Brown for ultrasounding our cattle.

Wolf Cattle Company for leasing us summer pasture

Montrose FFA for serving lunch

The Stockyards 4-H Club for assisting us with clean up

## *Understanding Birth EPDs*

There's not a single person out there who wants to spend every waking minute with their cows and assisting with births. And in a search to reduce the labor and death loss of calving some producers have been selecting primarily for low-birth-weight-EPD bulls. What we've noticed is that the birth EPD is NOT fully understood. So let's take a look at what these numbers actually mean.....

An EPD is a **prediction** of the average progeny performance, not a guarantee. To demonstrate how birth weight EPDs work, consider the following two bulls in Example 1.

### **Example: Birth weight EPD**

EPD in pounds: Sire A +5.1 Sire B +1.2

The expected difference in the progeny of Sire A and Sire B for birth weight is 3.9 pounds. Sire A has an EPD of +5.1 and Sire B has an EPD of +1.2. On the average, it would be expected that the calves from Sire A would be 3.9 pounds heavier at birth than calves from Sire B. This is assuming that **all calves are managed uniformly and are from cows of similar genetic merit and age.**

How one selects their bulls will more than likely change when an understanding of "Birth EPDs" is developed. Rather than searching for the lowest birth EPD in the sale, we should compare the birth EPDs using the mathematical equation demonstrated above.

Before heading off to the next bull sale an evaluation of your cow herd, including birth weights, calving issues is important before selecting a bull, but don't forget to look at all the traits! Selection based on a single trait can cost you performance and money. We are in the beef business; there is no substitute for fertility, soundness and performance.

In the February 2012 edition of the Angus Beef Bulletin, American Angus Association Regional Manager, David Gazda, "At the risk of being controversial, many of these small calf scenarios could be eliminated if the producers would simply be willing to accept more birth weight, particularly when breeding mature cows. One only has to attend a production or test station sale to witness firsthand how the heavier-birth-weight-EPD bulls are penalized and therefore sell at a substantial discount. Have calving-ease and low-birth-weight EPDs been overemphasized to commercial producers? Maybe; maybe not."

# *A Very Special Thank You to All Our Customers.*

We appreciate your support and value your friendship.

## *Thanks to our Friends for Helping with the Sale*

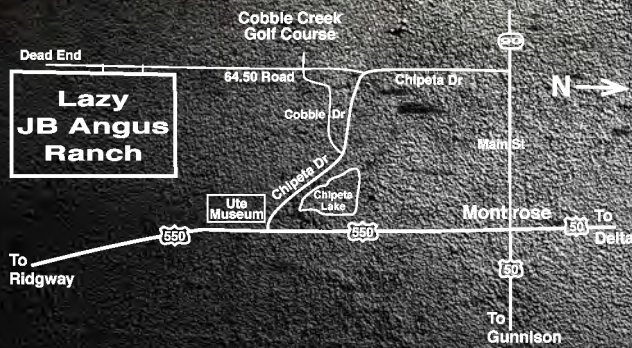

### *PAP Measurements*

Over the years cattlemen have attempted to reduce the selection and the development of cattle to numbers on a piece of paper. In reality there are numerous factors that affect the production and performance of cattle. We believe that PAP scores are an important selection tool but are often misunderstood. The registered bull business is extremely competitive creating a “NUMBERS RACE”. Every breeder has a different theory and philosophy regarding PAP scores. In all fairness to our customers who graze cattle at high altitude and those who do not we want to share with you the facts:

- Cattle at 6,000 or above feet are most at risk for “Brisket or High Altitude Disease”.
- Cattle PAP tested at low elevations (less than 5000 feet) may have acceptably low scores at that time, but when re-tested at higher elevations the score may increase. To increase the repeatability of the PAP test cattle should be tested at 6,000 feet or higher and must be at that elevation for at least 3-6 weeks
  - 41 and below – low risk
  - 42 – 45 – moderate risk
  - 46 and above – high risk
- The PAP test can **HELP** determine which animals are most at risk for brisket disease or a possible genetic risk, detecting the early stages of the problem, and elevated PAP measurement.
- Interestingly, the problem sometimes appears in feedlot cattle, even at low elevations, as they get heavier and closer to finish weight. This entire situation is not fully understood at this time but may be related to growth, size and the body’s demand for more oxygen, because the heart must work harder.

*A special thanks to Dr. Tim Holt for continually providing us with information and assistance in understanding High Altitude Disease and PAP measurements.*
